DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: on page 28, line 22, emitter layer should be (106) not (107). Appropriate correction is required.

Drawings

The drawings are objected to because the BSF layer (111) is not labeled in the Figures, as described on page 29, line 12. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Tayanaka (US 6,326,280). Tayanaka discloses a polycrystalline silicon substrate for a solar cell formed by growing a high purity polycrystalline silicon layer on a surface of a base obtained by slicing a polycrystalline silicon ingot obtained by melting metal grade silicon and performing one-direction solidification, wherein one-direction solidification is performed on a melt prepared by adding boron to molten metal grade silicon at an amount of about 10^{19} atoms/cm³ based on a concentration in the melt to produce the polycrystalline silicon ingot. See col. 1, lines 42-65; col. 7, line 42 – col. 8, line 13.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tayanaka (US 6,326,280) in view of Nakagawa et al. (US 6,429,035). Tayanaka discloses boron as a p-type dopant. However, Nakagawa is a teaching reference that teaches boron and aluminum generally used as p-type dopants. See col. 2, lines 60-61.

Art Unit: 1722

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Tayanaka to include aluminum, as suggested by Nakagawa, as a common p-type dopant.
